

Water Wednesdays!

at the Children’s Museum of Southeastern Connecticut
3-4:30pm • rain or shine • All activities free with Museum admission

Join us for three hands-on sessions about water and our coastal communities.

Use our EnviroScape® to learn about watersheds, protecting and preserving wetlands and forests, and how to help keep pollution out of our rivers, streams and Long Island Sound.

July 12 – Niantic River Watershed

What’s a watershed? Where does its water come from, and where does it go? How can we keep our streams, rivers and Long Island Sound waters clean, swimmable and home for aquatic life? Make it rain on farms, yards and streets of our EnviroScape®! See where you are on our big map of the Niantic River Watershed!

July 26 – Oswegatchie Hills Wetlands

What are wetlands? Who lives in them? Why do we need to protect them? Create a rainstorm on our wetlands EnviroScape® and see how wetlands help protect our rivers and streams from pollution. See what plants and animals depend on the wetlands in the Oswegatchie Hills. Plan your next trip to Oswegatchie Hills Nature Preserve in East Lyme!

August 9 – Long Island Sound & Beaches

How healthy is your favorite beach? Meet a local “Sound Sleuther” volunteer who is testing Niantic Bay. Use our EnviroScape® to learn about point and non-point source pollution and what you can do to protect our beaches. See the 2016 Long Island Sound Report Card!

This free series is a CMSECT collaboration with Save Oswegatchie Hills Coalition founders and Niantic River Watershed Committee.
